RECHARGEABLE HEARING AIDS

No more changing fiddly hearing aid batteries!!!

The recent focus on hearing aid technology is that “*you don’t hear with your ears, you hear with your brain*”.

Not only is the technology in the hearing aid algorithms changing dramatically – reducing your listening effort; helping you remember more of what is being said, giving you better speech understanding, and improving your ability to follow conversations with multiple speakers – but the latest hearing aids also allow for ease of hearing aid management. This is particularly important if dexterity and vision are problematic for the hearing aid wearer.

The latest hearing aids also allow you to connect to your *iPhone*, *iPad*, and *iPod*. This means:

1. Hands-free phone calls for any compatible smartphone;
2. Music in high-quality stereo sound;
3. Stream sound directly from your TV.

The hearing aid wearer has control at their fingertips via an iPhone *App*. The wearer can adjust the volume and acoustic programs with the tap of a finger.

Forget about changing batteries every few days. The hearing aid wearer simply seats their hearing aids in a charger at night, and they will be fully charged in the morning for a full day of hearing, including streaming. If you forget to charge overnight, a quick 30 minutes of charging will provide another 6 hours of use. This is state-of-the-art lithium-ion battery technology.

All in a sleek and discreet hearing aid design.
